Current feeding program:

Rainbow Meadows does not provide any supplemental nutritional product to its residents unless they are a “special needs” horse. Horses are maintained on 24 x 7 prairie pasture or prairie hay. Equine obesity is the leading cause of a number of equine health concerns and should be avoided at all cost through reasonable nutritional management. Whole grains are never appropriate for horses and other supplemental nutritional products are not needed for horses in good flesh that can maintain condition on forage alone and should be avoided. A vitamin and mineral supplement, such as Gro Strong by ADM Alliance, is a good way to provide a balanced intake. NAME maintains her weight on forage with one cup of Thrive per day as a treat.

Current hoof care program:

Rainbow Meadows is committed to the natural care of the equine hoof. This horse has been transitioned from any previous hoof care program to the Natural Barefoot Trim. We recommend that the horse remain barefoot at all times, unless booted or shod for special events with the boots and shoes removed as soon as possible to allow the hoof to move and expand as it should.
